

INTRO

Hey there - Thomas from Marathon Handbook here. Thanks for taking the time to grab a copy of this plan! We've put together a 15-week half marathon training plan and guide, with week-by-week workouts to progress to the half marathon.

CUSTOMIZING THE PLAN

No two runners are the same, and there's no such thing as a one-size-fits-all plan. That's why I make all my plans easy to customize: use the Google Sheets or Excel version of this plan to move things around to suit your weekly schedule, shorten or extend the plan, and mix up the workouts to suit your ability level.

In order to edit the file, please download it or make a copy (File>Make a Copy)

MEDICAL DISCLAIMER

This plan is for informational purposes only: it is not a certified exercise / health / wellness regime. Partake in run training at your own risk, always consult a doctor before starting a new exercise regime, and don't do anything stupid. Now let's get on with the details...

BREAKDOWN OF TRAINING WORKOUTS

Here's a brief rundown of the types of workout in the plan, and how to do them:

Cross Training: Any form of non-running aerobic workout. Examples include cycling, swimming, rowing, elliptical, aqua jogging, and hiking.

Distance Run: Base-building run to improve your endurance. These should be run at a comfortable pace—something around a 7 out of 10 on a rate of perceived exertion scale or a heart rate around 70-75% of your maximum heart rate.

Easy Run: Run at a conversational pace to aid recovery from harder workouts. These should be a 6-7 on an RPE scale.

Long Run: Long endurance workouts to improve physical and mental stamina.

Threshold Workout and Tempo Run: Run at a pace you can sustain all out for one hour.

Rest Day: No structured exercise. Focus on rest and recovery (stretching, foam rolling, taking it easy).

Speed Workout: Run at various race paces (indicated) to build speed and mental and physical tolerance for running fast.

Strides: Short accelerations – a short burst of speed where you gradually accelerate as you go.

Time Trial: Race-pace effort to assess your fitness level and rehearse the race experience.

Shake Out Run: Very relaxed run to loosen up the day before a race or key workout.

Strength Training

In addition to the training plan as written, it's also a good idea to strength train twice a week.

[Your strength training workouts should be total-body workouts, focusing on compound exercises like squats, lunges, step-ups, deadlifts, push-ups, pull-ups, rows, and core exercises. For our strength training guide for runners, click here.](#)

Questions?

[Check out our Marathon Handbook Facebook Group, it's an awesome community of runners sharing their knowledge, frustrations, and wins!](#)

Unfortunately I can't respond to individual queries these days, but the FB group is probably an even better source of running wisdom!
