

### INTRO

Hey there - Thomas from Marathon Handbook here. Thanks for taking the time to grab a copy of this plan!

We've created a 16-week beginner Olympic triathlon training plan that will help you build your fitness and competence in each of the three triathlon disciplines to finish an Olympic distance triathlon in 16 weeks.

### CUSTOMIZING THE PLAN

No two runners are the same, and there's no such thing as a one-size-fits-all plan. That's why I make all my plans easy to customize: use the Google Sheets or Excel version of this plan to move things around to suit your weekly schedule, shorten or extend the plan, and mix up the workouts to suit your ability level.

*In order to edit the file, please download it or make a copy (File>Make a Copy)*

### MEDICAL DISCLAIMER

This plan is for informational purposes only: it is not a certified exercise / health / wellness regime. Partake in run training at your own risk, always consult a doctor before starting a new exercise regime, and don't do anything stupid. Now let's get on with the details...

### BREAKDOWN OF TRAINING WORKOUTS

Here's a brief rundown of the types of workout in the plan, and how to do them:

[Zones: To calculate your heart rate zones for training, use our guide.](#)

#### Run/Walk Intervals

Run and walk the intervals indicated in each workout.

#### Easy Runs

Run at a conversational pace to aid recovery from harder workouts.

#### Rest Days

No structured exercise. Focus on rest and recovery (stretching, foam rolling, taking it easy).

#### Threshold / Tempo Runs

During the Threshold or tempo intervals, run at a pace you can sustain all out for one hour.

#### Strides

With strides, accelerate over the duration of the stride, reaching max speed at the end of each one.

#### Brick Workouts

A workout consisting of at least two different disciplines performed one immediately after the other. This works on transitions.

#### Speed Workout

Run intervals at the indicated pace for each individual workout.

#### Strength Training

In addition to the training plan as written, it's also a good idea to strength train twice a week.

[Your strength training workouts should be total-body workouts, focusing on compound exercises like squats, lunges, step-ups, deadlifts, push-ups, pull-ups, rows, and core exercises. For our strength training guide for runners, click here.](#)

Questions?

[Check out our Marathon Handbook Facebook Group, it's an awesome community of runners sharing their knowledge, frustrations, and wins!](#)

Unfortunately I can't respond to individual queries these days, but the FB group is probably an even better source of running wisdom!
